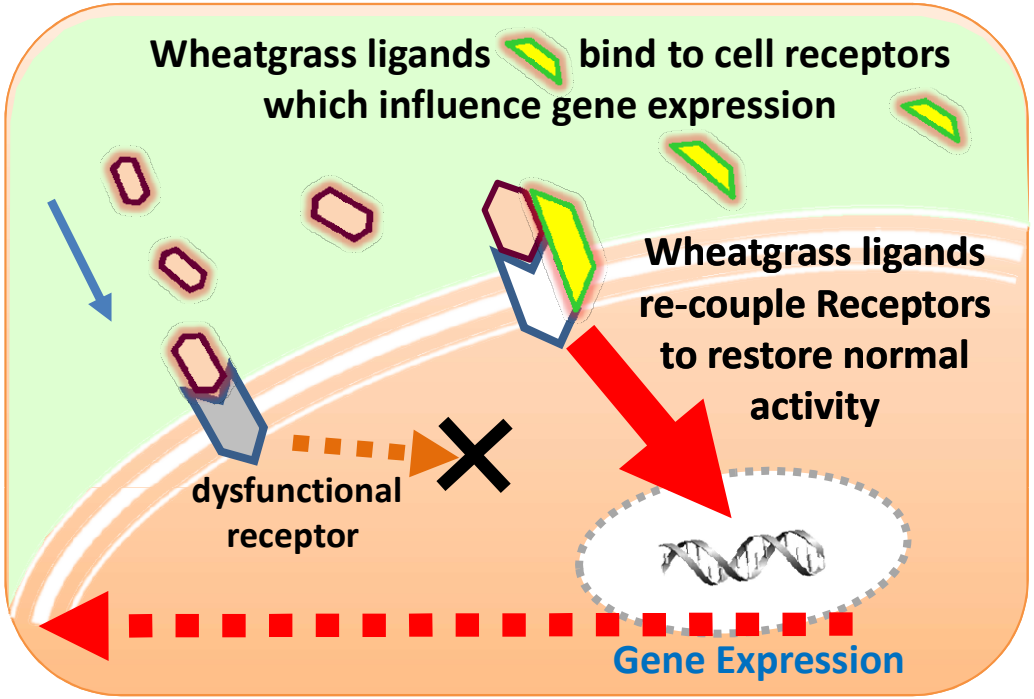
INEFFICIENT HEALING PROCESS
Normal internal messages to control gene expression for healing processes
dysfunctional cell receptor
Cell membrane
Cell Nucleus
Brain responds comprehensively and assists repair.
Injury, bleeding, skin condition, burn, chronic conditions
RESTORED HEALING PROCESS
Wheatgrass ligands bind to cell receptors which influence gene expression
functional cell receptors Re-coupled
Message to brain
Gene Expression



Wheatgrass ligands bind to cell receptors which influence gene expression
Wheatgrass ligands re-couple Receptors to restore normal activity
dysfunctional receptor
Gene Expression
